

Abstract

A method of attaching a leather trim cover to a foam pad utilizes a laminate. The laminate includes a double-sided adhesive film secured to a top surface and a heat-activated adhesive applied along a bottom surface. The method includes the steps of placing the top surface of the laminate against the leather trim cover; applying the bottom surface of the laminate to the foam pad; and heating the bottom surface of the laminate to bond the heat-activated adhesive to the foam pad and couple the leather trim cover thereto.
